

# Deconstructing fitness seascapes

**Robustness of loci**  
*robustness of loci across different genetic and environmental backgrounds*

**Environmental epistasis**

*epistatic coefficients across different environments*

**a**

**b**

**c**

**Reaction norms**  
*Genotype performance across environments*

**d**

**Features of trajectories**  
*change in mean/total within-path clonal interference across different environments*

**e (ii)**

**e (i)**

**'Seascape'-ness of fitness seascapes**  
*change in rank orders of fitness across different environments/phenotypes*

**Ruggedness of landscapes**  
*roughness-to-slope ratio of landscapes across different environments*
